Guidelines For Pool Balancing

To assist in minimizing chalking of a painted finish in the swimming pool environment, the following guidelines may be of assistance, particularly where an epoxy paint has been used. These are general recommendations only and are not intended to substitute for professional advice.

pH:	No higher than 7.8 No lower than 7.2
Calcium (water hardness):	No higher than 200 ppm No lower than 100 ppm
<u>Calcium (water hardness): for painted pools</u>	<u>No lower than 175 ppm</u>
Total Alkalinity:	No higher than 200 ppm No lower than 100 ppm
Chlorine Level:	No higher than 5 ppm No lower than 1 ppm
Salt Level:	4000 ppm Note: Salt levels should be turned down during winter or when bathing levels are low.
Stabilizer Level:	No higher than 50 ppm No lower than 30 ppm

Please consult your pool maintenance professional for further advice.
